**Installation**

1. **Sensor Check (Manual pg. 6)**
   AutoTrim Pro is equipped with trim tab position LED indicators. For this feature to work, actuator sensors must be present. Once installed, the presence of sensors will be indicated with the 2 upper yellow LEDs on the Helm Display, and 2 green LEDs on the Control Unit continuously illuminated.

2. **Component Installation (Manual pg. 7)**
   Installing AutoTrim Pro consists of two components—the Helm Display and the Control Unit. However, operation of the AutoTrim Pro assumes the presence of a complete trim tab system (Tabs, actuators and a pump). For help ordering trim tab system components, give us a call.

3. **One-time Calibration & Set-up (Manual pg. 20)**
   The Red LEDs should be flashing to indicate the system needs calibration. Press and hold the Sun + Moon buttons (See below) for 3 seconds until the lower yellow LEDs begin to flash. Press both DN buttons, then release when the tabs are fully down. Wait until the upper yellow LEDs flash. Press and hold both BOW UP buttons until the tabs are fully up. Release, and the four yellow LEDs in the corners should be continuously on. You’re Calibrated!

   *See the reverse side of this card for the one-time system set-up.*

---

**Control/Display Overview**

- **Tab Position Indication**
  Shows the current position of the trim tabs in manual and automatic mode.

- **Auto Trim Activity Indication**
  LEDs alert you to the automatic movements of the tabs in real time. You can see exactly what adjustments AutoTrim Pro is doing for you.

- **Adjust LEDs:**
  Dim (Moon) or Brighten (Sun)

- **Trim Tab Controls (Manual)**
  Override automatic mode with a touch to take full manual command of the trim tabs.

- **Favorite Settings (Automatic)**
  Store and activate two “Favorite” pitch and roll settings to automatically achieve your preferred cruising attitude.

- **Tabs “All Up” or “All Down” (Semi-automatic)**
  Fully retract or deploy tabs with a single touch in manual mode whenever needed.

Mon.-Fri. 8 AM - 5 PM (EST)

ATP Quickstart Guide-Hydraulic r081017.indd   1
8/11/17   5:04 PM
Orientation of Rest State (Manual pg. 23)
The FAV1 and FAV2 blue LEDs should be flashing as an indication
that the system is ready to be oriented. With the boat at rest in
the water, press and hold the Sun + All UP buttons for at least 5
seconds. Once released, all four corner LEDs will flash indicating
that a setting has been made.

Orientation of Acceleration State (Manual pg. 23)
Press and hold the Sun + FAV1 buttons for at least 5 seconds. All
four corner LEDs will flash indicating readiness. Quickly throttle up
to speed in a straight line for at least 10 seconds. Once the system
has sensed an acceleration, all four corner LEDs will flash again
indicating that a setting has been made, and the FAV1 and FAV2
LEDs will stop flashing, indicating that orientation is complete.

Angle Set-up for Idle Mode (Manual pg. 24)
In relatively calm water with the trim tabs fully retracted (Up),
run the vessel at a typical “No Wake Zone” idle speed. At a
steady running attitude, press and hold the Moon + FAV1
buttons for at least 5 seconds. Once released, all four corner
LEDs will flash indicating that a setting has been made.

Angle Set-up for Planing Mode (Manual pg. 25)
In relatively calm water, put the trim tabs to a half-down position
and run the boat at it’s fastest safe speed. Once at a steady pitch
and speed press and hold the Moon + FAV2 buttons for at least 5
seconds. Once released, all four corner LEDs will flash indicating
that a setting has been made. NOTE: The boat will temporarily run
in a “bow down” condition during the “Planing Angle Set-up” step.

Storing and Activating Favorite Settings (Manual pg. 37)
To use AutoTrim Pro in AUTO mode, you first need to set a
“Favorite” setting. Manually adjust the trim tabs, throttle, and engine
trim to attain your desired pitch and roll attitude. Next, press and hold
the FAV1 OR FAV2 button for 5 seconds (or more). Once released,
the blue LED will illuminate, and the system will immediately
go into AUTO mode. Pressing any other button on the control
will deactivate AUTO mode putting you back in manual control.
Reactivate the FAV setting any time with a quick button tap.
Favorite settings can be updated any time by repeating step 5.
