

## ACCURATE BV-500 REELS

Accurate has added the new BV-500-sized single-speed and two-speed reels to its popular Valiant lever drag series. Ideal for taking on striped marlin, sailfish, tuna, white sea bass, yellowtail, striped bass, and other saltwater predators, the new Valiant lever drags include BV-500 and BV-500N single-speed reels, as well as new BV2-500 and BV2-500N two-speed models. Every Valiant model features a compact yet rugged 6061 T6 aircraft-grade aluminum frame. Protected by a tough, corrosion-resistant exterior is Accurate's patented TwinDrag system, uniquely engineered to provide ultra-smooth consistent pressure with up to 30 pounds of drag. Each BV model also features precision-cut stainless steel gears that mesh perfectly for unsurpassed cranking power, while seven shielded and sealed Class-5 ABEC bearings and one ARB bearing ensure ultra-smooth reliable performance. The single-speed BV-500 holds 500 yards of 50-pound test braided line, while the BV-500N holds 350 yards of 50-pound test braid. Accurate's two-speed BV2-500 or the narrow BV2-500N both feature a high-speed 6:1 retrieve and a winch-like 4:1 gear ratio that can be changed with the simple touch of a button. ## BAMFLURO FLUOROCARBON LEADER MATERIAL

By nearly matching the refractive index of saltwater, a chemical engineer who loves fishing and also has years of experience in fluoropolymer processing was able to develop this product line that is virtually imperceptible to fish. Since the refractive index of the fluorocarbon leader is close to the refractive index of saltwater, very little light is reflected by the leader as light passes through water, making the leader difficult for the fish to see. This is why a fluorocarbon leader catches more leader-shy fish than standard monofilament. BAMfluoro fluorocarbon leader is made in the USA with polymers that offer excellent abrasion resistance and strength combined with super invisibility and was developed specifically for offshore fishing. BAMfluoro fluorocarbon leader is available in 40-, 50-, 80-, 100-, 130-, and 180-pound test. [Contact: BAMfluoro at 651-347-4226 or visit www.bamfluoro.com.](http://www.bamfluoro.com)

## BENNETT MARINE AUTOTRIM PRO

Bennett Marine's new AutoTrim Pro (ATP) automatically and actively levels the pitch and roll of most boats with trim tab systems via two user-programmable Favorite buttons that regulate the boat's trim angle based on settings selected by the operator, and then holds that angle across a variety of speeds and shifting conditions. When required, the operator can take manual control at any time by simply pressing any button on the Helm Display. Additional conditions ATP improves include listing, chine walking, and porpoising. ATP combines a variety of features including automatic trim tab control, manual trim tab control, automatic tab retraction, and trim tab position indication into an easy-to-use, space-saving helm display. Features in Manual or Auto mode include one-touch All Up and All Down buttons. LED trim tab position indicators display each trim tab's position and flash to show automatic actuation activity. There's also two Favorites settings for auto trim mode, while an Auto tab retraction feature automatically retracts tabs when the boat's ignition is turned off.
